

**Nimbus Water Technologies – TW2 or 3 BB20 phased water Filtration system with Ultra Violet**

**For borehole water, rain water harvesting or municipal back-up water filtration-** From source to tank/s – post tank and pump, through twin or triple filtration, 1 or 2 x sediment filtration & 1 x carbon filtration, to 5um and final treatment, Ultra Violet – treating all the water going into the home, lodge, B&B, or commercial office building, on demand. Note for borehole, river or dam water treatment, require a laboratory SANS241/2015 water test certification. The TW2 or 3 BB20-UV system often linked post a water softening, Nitrate removal or Iron/Manganese removal ion exchange system.

<b>Model TW2 or 3 BB</b>	Available with twin or triple filtration to 5 micron
<b>Dimensions/Size</b>	W1100 x H1100 x Depth 300mm & weight at 10kg
<b>Stainless Steel Ultra Violet system with control box</b>	Subject to flow – UV sized for the TW BB20 filtration - a 2720lt/hr/40watt or 5450lt/hr/85watt – larger flow units available.

Raw, un-treated water from borehole or municipal, local water supply

Treated water to usage areas

Filter Cartridge selection based on required filtration – Standard combination will be 5 micron SEDIMENT as pass one, pass 2 & 3 Carbon Block to remove toxins & improve taste and final, ULTRA VIOLET to disinfect the water – KILL BACTERIA
